

## REMARKS

The objection to the drawings is not understood. Feature 86 is identified in the specification at page 12 lines 2 - 3.

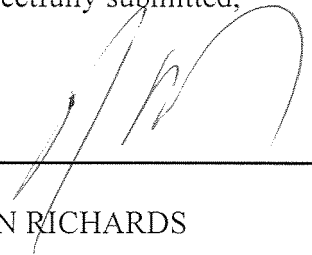

The claims have been amended as suggested by the Examiner to meet the issues raised under 35 USC 112 and the examiner's suggestions adopted. In claim 5 it has been made clear that the dispenser is part of the container connection means.

The applicant has noted with appreciation the examiner's observation that the subject matter of claim 10 would be allowable if amended to incorporate the features of the claim on which it depends. In view of this and without prejudice to the applicants right to pursue claims to other subject matter disclosed in the present application in a continuing application, the features of claim 1 have been incorporated into claim 10 and the remaining claims made directly or indirectly dependent on revised claim 10. New claims 15 - 25 parallel the claims dependent on claim 10 but are dependent on revised claim 11. New claim 26 is similar to claim 10 but defines the connections in structural terms rather than "means for" language. It is submitted that it is patentable for the same reasons. Claim 27 is dependent on claim 26 and further defines the connections. New claims 28 - 30 are dependent on claim 26 and parallel original claims 11, 3 and 4 written in structural rather than "means for" language. New claims 31 and 32 find support at page 8 lines 26 - 28.

In view of the foregoing, it is submitted that this application is in order for allowance

and an early action to this end is respectfully solicited.

Respectfully submitted,

---
